"eof-audit" step (skill analyse-parcours) — Tool pipeline -> EOF reference

Already collected sources (base journey + e-footprint)

env-data.json
(device_mix, servers[], traffic, tech_stack...)

audit/har-analysis.json
(domains, http_codes, duplicate_urls)

audit/coverage-analysis.json
(unused JS/CSS per page)

cwv.json
(LCP/INP/CLS — CrUX or PageSpeed lab)

cwv.json extended in Phase 1 (2026-09-03): collect_cwv_pagespeed.py additionally requests the "accessibility" and "best-practices" categories (same PageSpeed API call, no extra network cost) -> accessibility_score_pct / best_practices_score_pct

Phase 1 extractors (new, 2026-09-03)

parse_html_criteria.py
live re-fetch of already audited pages
(the captured .har does not contain the HTML/CSS bodies — verified: 46/311 entries with a body, none of them HTML/CSS pages)
-> html-css-criteria.json

analyze_security_headers.py
local security score (securityheaders.com type) from the headers already in the .har
-> security-headers-analysis.json

scan_wellknown.py
direct fetch security.txt / robots.txt / sitemap.xml (3 public HTTP requests)
-> wellknown-scan.json

Pitfall encountered and fixed on octo.com: robots.txt AND sitemap.xml returned a status 200 but the SPA fallback HTML (catch-all routing), not the requested resource -> detection added so a false "present" is not counted.

run_eof.py (deterministic, no LLM calculation)

Load eof-reference.json
(54 criteria + 16 Quick diagnostic, produced by the eof skill, NEVER regenerated here)

Load the 7 sources above into a single data{} dict

Rule "automatable" settles without ambiguity ?

yes

Tick one option of the 5-choice menu (including "🤔To be assessed" if ambiguous zone — still an explicit answer, not an "I don't know")

no / category "partial"

Display a contextual hint in the appendix
(confidence low/medium, never ticked)

Compute the scores per dimension
(weighted average over the real answers)

Anti-fabrication policy unchanged:
7 detailed automatable criteria (was 4)
+ 11 "partial" hints (was 6) after Phase 1.
36 criteria remain "I don't know" (organizational/product questions).

-> eof-audit-results.json
(summary, consumed by generate_report_html.py)

-> eof-filled.md
(full reference, answer/context + source)

-> eof-radar-<domain>.svg
(6-dimension radar, "N/A" if no answer)
