EOF skill (EROOM Optimization Framework) — Tool pipeline

EOF skill — generate_radar_svg.py (independent of Block 2)
Input: list (category, value 0-100)
— fictitious for a test, real once
an audit is filled in (ex. octo.com, upcoming)
generate_radar_svg.py::radar_svg()
Compute the coordinates by trigonameetry
(cos/sin, 1 axis every 360°/n)
Draw the grid — real circles
0/25/50/75/100 % (not hexagons)
Draw the data polygon
(straight lines between the points,
navy blue #2D4675, contrast ~9.35:1)
Escape the text (xml.sax.saxutils.escape)
— a raw "&" breaks the SVG rendering
Bug found and fixed along the way:
unescaped "Storage & Data" broke
the XML parsing, truncating the whole rendering
after this label in some browsers.
-> .svg file
